

REgarding RM-10521 Please note that I am so much against this proposal that I might not be clear in my ability express myself clearly. I note the number of incursions into Amateur Radio Primary and Secondary allotments to be on the rise and strongly believe that for the amateur radio Service to be able to provide communication in the public interest, any further dilution of frequency spectrum will diminish the ability to do the public good and meet our responsibility to serve in times of communication emergency.
